

As the only one of its kind, Push-in Container can be operated by one person only. Similar products often require two to three people for the same operation.

## **PUSH-IN CONTAINER**

The new innovative loading method means that the pallet truck is pushed directly in, without the elevation found on traditional containers.

The container comes in two variants, Push-in Container and Push-in Basket.

The Push-in container is a closed container and can be used offshore, and the Push-in Basket for loading and unloading at quay. The Push-in Container is certified according to the strict standard 2.7-1 Offshore and both containers are certified for up to 2 tonn, and approved in accordance with The Norwegian Veritas.
